

Cortez Hudson

CortezHudson@chlabs.tech | www.chlabs.tech

Professional Summary

Operations specialist with a proven track record of zero-incident compliance and strict Standard Operating Procedure (SOP) execution in commercial hazardous materials logistics. Combines high-consequence safety discipline with practical, self-directed server and storage management, including bare-metal system assembly, headless Linux administration, and Docker service deployment. Seeking to bring verified operational rigor, mechanical inspection standards, and hardware diagnostic capabilities to Data Center Infrastructure roles.

Core Tech Skills & Endorsements

- **Licensing & Operational Compliance:** CDL Class A | Hazardous Materials Endorsement (HME) | Tanker | Doubles & Triples | DOT & FMCSA Regulatory Compliance | Standard Operating Procedure (SOP) Execution | Chain of Custody & Bill of Lading (BOL) Tracking
- **Hardware & Break-Fix Infrastructure:** Bare-Metal Server Assembly, LSI Host Bus Adapter (HBA) Controller Setup, SAS/SATA Drive Staging, Component Diagnostics (CPU, Motherboard, PCIe, PSUs), Multimeter Testing, POST Code & Debug LED Diagnostics
- **Networking & Cabling (L1–L3):** Cat6 Cabling & RJ45 Termination, Physical Layer Link Diagnostics, IPv4 Static Addressing & Gateway Routing, TCP/UDP Port Auditing, DNS Sinkholing (Pi-hole)
- **Linux Systems, Storage & Tooling:** Linux CLI (Debian, Ubuntu, Fedora, Arch), Bash Scripting, Drive Pooling & Parity Arrays (MergerFS, SnapRAID), Mount & Filesystem Troubleshooting (ext4, NTFS), Docker & Docker Compose Containerization, Volume Mapping, SSH/SFTP, `tmux`, `rsync` Workflows

Self-Hosted Infrastructure & Systems Management | Homelab | October 2024 – Present

- **Hardware Assembly & Fault Isolation:** Assembled a dedicated bare-metal multi-drive Linux server; executed BIOS/UEFI firmware updates, PCIe lane and power distribution planning, and component-level POST fault isolation using onboard debug LEDs and low-voltage multimeter testing.
- **Network & Systems Administration (L1–L3):** Maintained a headless Linux production environment over SSH using CLI utilities; diagnosed physical link drops via switchport LEDs and RJ45 testing, configured static IPv4 addressing, gateway routes, local DNS sinkholing (Pi-hole), and encrypted mesh overlays (Tailscale/WireGuard) without public port exposure.
- **Containerized Services & Storage Maintenance:** Deployed and maintained self-hosted services using Docker Compose, configuring port mappings and mounting host storage directories; managed multi-drive storage pooling and scheduled parity checks to ensure data integrity.

Professional Experience

R+L Carriers | Line Haul / P&D Driver | July 2022 – July 2025

- **Strict Regulatory Execution:** Successfully navigated rigid FMCSA and Department of Transportation (DOT) federal frameworks across 30 states with zero compliance infractions or safety incidents.
- **High-Value Chain of Custody:** Managed meticulous inventory and asset tracking documentation, verifying Bills of Lading and exact UN chemical identification numbers for bulk, hazardous, and multi-trailer loads.
- **Emergency Protocol Management:** Maintained strict situational awareness and adherence to federal emergency response regulations (ERG/FMCSR guidebooks) under high-consequence transport conditions.

Werner Enterprises | CDL Class A Driver | May 2021 – July 2022

- **SOP Adherence & Audit Compliance:** Ensured 100% audit compliance by maintaining high-fidelity logbooks and digital records, ensuring compliance with federal safety metrics, weight distribution profiles, and multi-point vehicle inspection sequences.
